Art Unit: 2665

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
2. A substitute specification includes the claims is required pursuant to 37 CFR 1.125(a) because each of the specification and claims contains improper spacing between words (for example: page 1, line 21, page 2, line 19, page 3, lines 2 and 11, page 4, lines 1, 4, 23, page 5, lines 23, 25, ..., claim 1, lines 14, 30, 52, ..., etc.) which renders the papers difficult for printing or copying.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and (c)

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 17, "said scheduling module", line 49, "said input port scheduling module", each has no clear antecedent since there are a plurality of input port scheduling modules recited. Is it referring to the input port scheduling module in the preceding stage or current stage or next stage or is it referring to each of the input port scheduling modules ?

In claim 11, it is unclear as to whether a method or an apparatus is claimed since the claim contains both method steps and means plus function which renders the claim vague and indefinite as a hybrid claim.

Art Unit: 2665

In claim 12, line 4 and claim 13, line 2, "said reservation order carrying means" lacks antecedent basis.

4. Claims 1-20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Akata, Saxe, Aybay et al., Aybay and Isoyama et al. are all cited to show the common feature of data flow control in switching network utilizing time slot interchange and scheduler similar to the claimed invention.
